

Minutes of Meeting
Colbert Water Sampling Committee
August 30, 1991

Present: Scott Fink, (b) (6) and Bill Wedlake

**I. Rough draft letter to John Anicetti
at Environmental Health
RE: House Bill 2929**

The letter discusses duplication of efforts in the testing of new wells in the Colbert area. The Committee agreed to send the letter, but felt that a meeting should be scheduled so that everyone fully understands all the angles, and possible problems involved.

Bill will arrange for a meeting with John and let the Committee know.

II. Sample Results

The Committee discussed the results of the August sampling round. Low level contaminants were detected in 4 wells. The (b) (6) property (formerly (b) (6)) showed contamination for the first time. The amount was not substantial. The property is currently tested twice a year, but will now be tested quarterly, based on the sampling criteria. North Glen Estates, Wahoo Water District and Sterling Springs all showed contaminants, but no alarming levels were detected.

III. Field Sheets

The current Field Sheets are not accurate as far as well depth and estimated purge volumes and are going to be revised. (b) (6) said she would send a copy of a well test log as a reference.

**IV. Letter from Department of Ecology
Mike Kuntz; dated August 16, 1991
RE: Review of Draft Management Plan**

The Committee agreed that none of them understand the response from Mike. It is our understanding that during a meeting in Olympia with Dean Fowler, both Mike and Neal Thompson gave their verbal approval to the program as soon as they received a letter tying the 3 documents together. Bill proposed not responding at this time and allowing time for Neal Thompson to submit EPA's comments.

It was agreed to continue with the program as though there is a verbal approval.

Next meeting: Last week of September
